

IMPORTANT SAFETY INSTRUCTIONS

⚠ WARNING

Only use standard-long blue 14.1 oz. or standard-wide green 16.4 oz propane cylinder.

Using the **WRONG** Cylinder or Gas may result in flare-ups which can result in **SERIOUS INJURY or DEATH.**

Always inspect the threaded outlet of the propane fuel cylinder and remove any dirt that may be there. Improper attachment of the propane gas cylinder to the fogger may result in a gas leak. Care must be taken not to cross thread when attaching the cylinder.

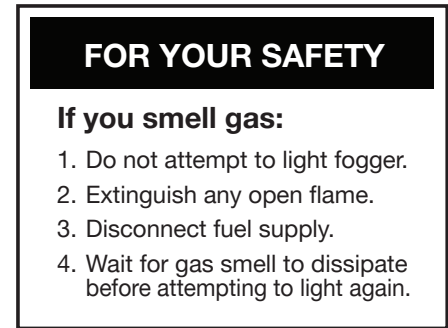

⚠ WARNING

Hot liquid may squirt.

Do not stand in front of the fogger or point at others while heating or in use.

Doing so can result in **SERIOUS INJURY or DEATH.**

FOR YOUR SAFETY

If you smell gas:

1. Do not attempt to light fogger.
2. Extinguish any open flame.
3. Disconnect fuel supply.
4. Wait for gas smell to dissipate before attempting to light again.

⚠ DANGER

DO NOT USE indoors or in enclosed spaces!

Operating the fogger in an enclosed area, where fog can become heavily concentrated, may cause fire or explosion, which can result in **SERIOUS INJURY or DEATH.**

⚠ CAUTION

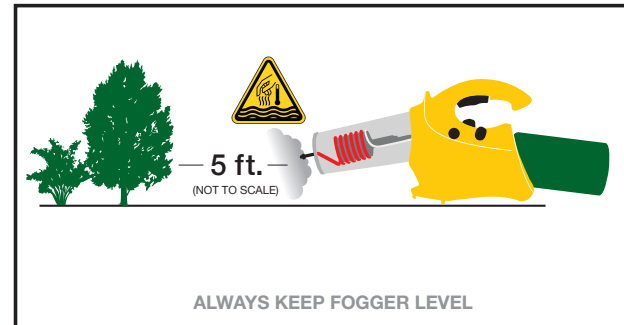

Do not pump while coil is cool. Pumping while cool will cause liquid to be ejected.

⚠ CAUTION

Allow fogger to properly heat prior to pumping! Ejecting liquid while heating is normal.

NOTICE

Fogger is ready when coils are glowing red.

NOTICE

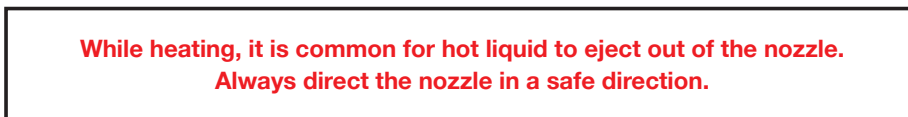

Maintain 5' distance (min.) from the nozzle tip to any surface or ornamental plant!

⚠ WARNING

ALWAYS disconnect fuel supply before storing.

NEVER set fogger onto or near flammable objects or surfaces.

While heating, it is common for hot liquid to eject out of the nozzle. Always direct the nozzle in a safe direction.
